Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Hwang reference does not teach a plurality of reconfigurable pulsers within said probe responsive to one or more transmit timing signals received from an external system to transmit pulses to said plurality of transducers, wherein each reconfigurable pulser is coupled to a respective transducer, and wherein each probe further includes a multiplexer that receives said timing signals from said external system and provides said signals to said plurality of transducers.

Examiner would like to point out that Hwang teaches a plurality of reconfigurable pulsers within said probe (Fig. 5 elements 402, 404, 414, and 416) responsive to one or more transmit timing signals received from an external system to transmit pulses to said plurality of transducers (Fig 5 elements 408 and 410 and serial bus connector for get signals from the external system Col. 7 lines 30-32), wherein each reconfigurable pulser is coupled to a respective transducer (Col. 6 lines 45-48), and wherein each probe further includes a multiplexer that receives said timing signals from said external system and provides said signals to said plurality of transducers (Fig. 5 element 408, 410, and 418). Hence all limitations have been met and the final rejection still holds.
